

Suffering from Reflux or Heartburn?

Joint Township Hospital now offers minimally invasive surgical treatment for acid reflux and severe heartburn.

If you suffer from Gastroesophageal Reflux Disease (GERD), you know that it can really have a negative impact

on your quality of life. It forces you to limit the types of food and drinks you enjoy, can cause sleep problems, and even lead to missed opportunities spending time with loved ones. The good news for acid reflux sufferers in the Grand Lake region is that now, Grand Lake Health System offers an innovative surgical procedure that effectively treats GERD without incisions and scarring, drastically reduces risks for complications, and shortens recovery times.

BENEFITS OF TIF (Transoral Incisionless Fundoplication)

- Incisionless surgery, performed through the mouth not an incision
- Less pain and faster recovery
- Reduces or eliminates use of pills
- Long-term use of pills has been shown to increase incidence of hip fractures and osteoporosis

Talk to your physician to find out if this life-changing surgery at Joint Township District Memorial Hospital is right for you. Or log on to www.grandlakehealth.org to learn more.
