

# Life Saving Screenings

Without symptoms, how do you know if you have vascular disease?

*Vascular disease is one of the leading causes of disability and death in the United States — however, often there are no symptoms until it is too late.*

## Vascular screenings can help detect three vascular diseases:

- 1) Carotid Artery -**  
This is a painless ultrasound test to visualize the build up of fatty blockage in the carotid artery. This test helps identify the risk of stroke..... **\$20**
- 2) Abdominal Aorta -**  
This is a painless ultrasound test to detect abdominal aneurysms that could rupture and be fatal. The largest majority of people who have an aneurysm have no symptoms ..... **\$20**
- 3) Peripheral Artery Disease -**  
This is a painless measurement of circulation to your legs to detect peripheral arterial disease. Abnormal results indicate high risk of coronary artery disease and peripheral artery disease ..... **\$20**
- Vascular package**  
Carotid Artery, Abdominal Artery, and Peripheral Artery ..... **\$50**

## Screening FAQs:

- ? Do I need to make an appointment?**  
Yes, in order to better serve you, please call 419-394-9599 and ask for central scheduling to make your screening appointment.
- ? Should I take my medicine before?**  
Yes, take any prescribed medications that you normally take.
- ? Can I eat before these screenings?**  
Do not eat 4 hours prior to your appointment. If additional testing is required by your physician, you may be asked to follow different guidelines.
- ? What should I wear for the screening?**  
Please wear loose fitting clothes and no pantyhose, so that the technologist has easy access to your neck, stomach, and lower legs.
